About Us | Why ITL | Apparel Branding Products | Variable Data Systems | Supply Chain Application | Sustainability

Care Labels

ITL develops and produces its own polyester and cotton printing substrates. This fosters innovation and enables exact matching of care label colours to the main woven labels.

ITL offers care labels in virtually any configuration:

- Woven Edge Single sided satin
- Woven Edge Taffeta
- Slit Satin
- Polyester & Cotton Herringbone Twill
- Coated Nylon
- Continuous Printed Tapes
- Recycled substrates are available in most formats

ITL also offers a variety of printing substrates for use by Commercial label printers and in house systems.

and variable data printing
applications.

Screen Printed Labels

Screen printed labels have recently become popular as a substitute for woven labels because the screen printing process provides vibrant colour with fine detail cost effectively.

To take advantage of this process and to accommodate data screen printing, ITL has developed its own screen printing machines capable of single or double sided, multi colour, short run printing.

Super soft printing substrates are used for screen printed labels. These substrates can be woven in Polyester, Cotton, Polycotton and Spun Polyester in any colour combination.

Heat Transfers

ITL has perfected multi colour, stretch transfers for both reel to reel and cut piece application.

Transfers can be halo-free if required, in addition, eco-friendly water-based inks can be used if preferred.

Complete package of innovative brand labeling and variable data printing applications.

Variable Data Systems

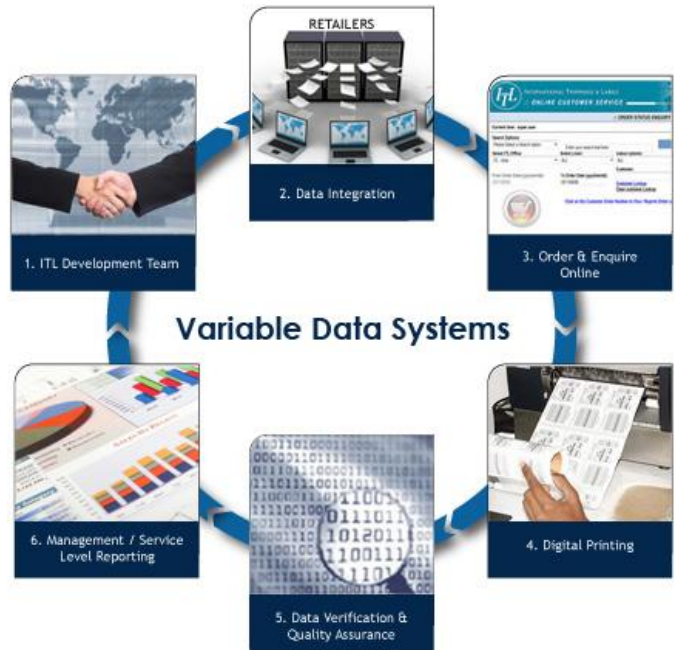

Retailers rely on variable data printed labels to control the movement of goods in the supply chain and prices at the till. Integrity of data is critical and variable data labels must be supplied to apparel manufactures on time and with short lead times.

ITL has developed a data management system that can receive a retailers variable data order information, process this without any manual re-keying and interface the data directly with the printing process at numerous printing locations around the world.

Variable data orders are managed online using the Group's propriety supply chain application [speed-track](#) which enables vendors to place these orders together with any requirements for woven promotional hangtags and care labels as a complete package.

This system is tightly intergrated with the group's ERP system for additional functionality and ease of use.

This online data management and printing system has proven to be robust and reliable for many of the world's largest retailers and their vendors. Variable data labels can be printed using laser, thermal and litho print technologies.

Global apparel branding, product ID and supply chain management solutions

Long established track record, partnering with many of the world most respected retailers.

Supply Chain Application

Managing complex global label programs requires a reliable supply chain platform. ITL's SPEED-TRACK online platform has been designed and developed to provide ITL with the competitive edge in delivering label developments on a global scale – fast, reliability and within tight lead times.

Sustainability

The ITL Group recognizes the need to contribute to the sustainability of the planet's natural resources. We believe sustainable development means adopting business strategies, activities and processes that meet the needs of the company and its stakeholders today, while protecting, sustaining and enhancing the human and natural resources that will be needed in the future.

ITL is committed to the assisting customers in their efforts to preserve the environment. ITL believes that business objectives that promote product differentiation, reduced costs, improved efficiencies and compliance with quality, social and ethical standards, are complementary to value addition and wealth creation.

As part of its evolving environmental policy, the ITL group is:

- Using the ISO 9001 2000 Quality Management System with defined objectives and action plans to facilitate continuous process improvement and waste reduction programmes.
- Value-engineering products to reduce the raw material content and any adverse affect of processes on the environment, whilst maintaining fitness for use.
- Giving preference to suppliers who have similar shared values to our own and our customers.
- Adhering to local environmental regulations.
- Developing and introducing an environmental impact education programme for all employees.
- Recycling of packaging materials.
- Ensuring efficient use of water and energy.
- Disposing of waste properly.
- Recycled raw materials.
